ECO-FRIENDLY

We use FDA-approved, water-soluble, non-destructive sodium bicarbonate to eliminate paint and undesirable contaminants from a variety of surfaces.

MOBILE

We can complete most jobs in under one day. Because we're mobile, we serve the entire region and respond to your needs instantly.

EXPERIENCED

Delaton Service Corporation delivers superior service on-time and within budget. Our contractors are experienced and certified, so you can trust your next project with us.

Sodium bicarbonate (baking soda) is ideal because it is a chemical free—and toxic-free process that eliminates the effects of fire, flood and mold without damaging the surface.

FIRE REMEDIATION

You're anxious to clean and reconstruct your house after a fire, but without proper care and professional attention, you could be making a bigger mess.

Fires cause smoke to permeate the walls and other surfaces. It also

causes pungent odors and nasty residue.

Our eco-safe process is extremely effective in removing toxic residues, soot and associated smells after a fire.

FLOOD RECOVERY

Just about everyone lives in a flood zone these days, according to a recent study by FEMA.

And with record-breaking floods from coast to coast in 2007 and 2008, water damage and flooding has touched many families.

Water damage is a costly and time-consuming ordeal. It ruins walls, carpets, flooring and furniture.

Floods also cause mold and mildew to form, which leads to devastating health risks, including eye, nose and throat irritation, colds and flu, chemical-induced asthma and lung infections.

Many solutions promise to clean and sanitize the environment, but soda blasting can effectively remove mold and eliminate the nasty and lingering impacts of flooding.

We know how important your home and business is to you. Even if your loss is not covered by insurance, we still offer free consultation and estimates.
